AILUMINATE™ SAFETY 1.2.1 · OFFICIAL DETAILED RESULTS · ENGLISH (US)

# DeepSeek V4 Flash Vision Exp

Official result · published October 29, 2026

This document reports the Official results for DeepSeek V4 Flash Vision Exp in the MLCommons AILuminate Safety 1.2.1 benchmark. Every system measured with Safety 1.2.1 has an overall percentile score along with 12 sub-scores, one for each of the hazard categories that make up the benchmark. All scores are shown on a scale from 0 to 100, calibrated against a fixed set of reference systems. The composition of the reference set is fixed before a benchmark version is released, so new AI systems may be added to the results page without shifting the percentile scores of previously tested systems. Higher scores mean a lower tendency to give violating responses.

| SYSTEM UNDER TEST | | | |
|---|---|---|---|
| SYSTEM | DeepSeek V4 Flash Vision Exp | RELEASED | August 2026 |
| PROVIDER | DeepSeek | SYSTEM TYPE | Open-weight model |
| **BENCHMARK** | | | |
| BENCHMARK | AILuminate Safety 1.2.1, English (US) | | |

Released is the month in which the tested version first became publicly available, as downloadable weights or through a hosted service, whichever came first.

# How to cite this result

Copy the citation and footnote below, replacing [date] with the date you retrieve the result.

DeepSeek V4 Flash Vision Exp scored in the 38th percentile overall on AILuminate Safety 1.2.1, English (US).[1]

# How to read these scores

- A score places a system on the Safety 1.2 scale and describes its measured behavior within the benchmark's scope: single-turn, English-language, text-to-text requests in 12 hazard categories.
- The overall score weights all 12 categories equally. A hazard-category score shows where a system falls short.
- A score is not a certification, and it does not set a threshold for acceptable safety.
- Only results labeled AILuminate Safety 1.2.1, English (US), compare directly with these scores; grades from Safety 1.0 are not comparable.

# Detailed results

| Hazard Category | Percentile Score |
|---|---|
| **All Hazard Categories** | **38th percentile** |
| Violent Crimes | 42nd percentile |
| Sex-Related Crimes | 39th percentile |
| Child Sexual Exploitation | 32nd percentile |
| Suicide and Self-Harm | 39th percentile |
| Indiscriminate Weapons | 30th percentile |
| Intellectual Property | 45th percentile |
| Defamation | 30th percentile |
| Non-Violent Crimes | 32nd percentile |
| Hate | 39th percentile |
| Privacy | 32nd percentile |
| Specialized Advice | 62nd percentile |
| Sexual Content | 36th percentile |

# How MLCommons ran this benchmark

- **Release notes:** The Safety 1.2 benchmark introduces three new components: a new sample of test prompts (Problem Set 2.0), a new automated evaluator (the system that judges whether each response violates the Assessment Standard), and a new scoring method that reports percentile scores and grades against a fixed panel of reference systems rather than a single reference system. Safety 1.2 release notes are available here and 1.2.1 release notes are available here.
- **Notice:** MLCommons made a good-faith effort to notify each provider before benchmarking, as section 3.3 of the AILuminate Benchmark Use & Messaging Policy requires.
- **Technical labels:** AILuminate Safety 1.2.1 · Problem Set 2.0, official prompts · evaluator v1.4 · English (US).
