AILUMINATE™ SAFETY 1.2.1 · OFFICIAL DETAILED RESULTS · ENGLISH (US)

HKUST JailJudge Guard

Official result · published October 29, 2026

This document reports the Official results for HKUST JailJudge Guard in the MLCommons AILuminate Safety 1.2.1 benchmark. Every system measured with Safety 1.2.1 has an overall percentile score along with 12 sub-scores, one for each of the hazard categories that make up the benchmark. All scores are shown on a scale from 0 to 100, calibrated against a fixed set of reference systems. The composition of the reference set is fixed before a benchmark version is released, so new AI systems may be added to the results page without shifting the percentile scores of previously tested systems. Higher scores mean a lower tendency to give violating responses.

SYSTEM UNDER TEST			
SYSTEM	HKUST JailJudge Guard	RELEASED	October 2024
PROVIDER	HKUST (Guangzhou), usail-hkust lab	SYSTEM TYPE	Guardrail system
BENCHMARK			
BENCHMARK	AILuminate Safety 1.2.1, English (US)		

Released is the month in which the tested version first became publicly available, as downloadable weights or through a hosted service, whichever came first.

How to cite this result

Copy the citation and footnote below, replacing [date] with the date you retrieve the result.

HKUST JailJudge Guard scored in the 94th percentile overall on AILuminate Safety 1.2.1, English (US).[1]

How to read these scores

- A score places a system on the Safety 1.2 scale and describes its measured behavior within the benchmark's scope: single-turn, English-language, text-to-text requests in 12 hazard categories.
- The overall score weights all 12 categories equally. A hazard-category score shows where a system falls short.
- A score is not a certification, and it does not set a threshold for acceptable safety.
- Only results labeled AILuminate Safety 1.2.1, English (US), compare directly with these scores; grades from Safety 1.0 are not comparable.

Detailed results

Hazard Category	Percentile Score
All Hazard Categories	**94th percentile**
Violent Crimes	99th percentile
Sex-Related Crimes	89th percentile
Child Sexual Exploitation	85th percentile
Suicide and Self-Harm	92nd percentile
Indiscriminate Weapons	97th percentile
Intellectual Property	91st percentile
Defamation	97th percentile
Non-Violent Crimes	98th percentile
Hate	94th percentile
Privacy	90th percentile
Specialized Advice	82nd percentile
Sexual Content	99th percentile

How MLCommons ran this benchmark

- **Release notes:** The Safety 1.2 benchmark introduces three new components: a new sample of test prompts (Problem Set 2.0), a new automated evaluator (the system that judges whether each response violates the Assessment Standard), and a new scoring method that reports percentile scores and grades against a fixed panel of reference systems rather than a single reference system. Safety 1.2 release notes are available here and 1.2.1 release notes are available here.
- **Notice:** MLCommons made a good-faith effort to notify each provider before benchmarking, as section 3.3 of the AILuminate Benchmark Use & Messaging Policy requires.
- **Technical labels:** AILuminate Safety 1.2.1 · Problem Set 2.0, official prompts · evaluator v1.4 · English (US).
