AILUMINATE™ SAFETY 1.2.1 · OFFICIAL DETAILED RESULTS · ENGLISH (US)

OpenAI gpt-oss-120b

Official result · published October 29, 2026

This document reports the Official results for OpenAI gpt-oss-120b in the MLCommons AILuminate Safety 1.2.1 benchmark. Every system measured with Safety 1.2.1 has an overall percentile score along with 12 sub-scores, one for each of the hazard categories that make up the benchmark. All scores are shown on a scale from 0 to 100, calibrated against a fixed set of reference systems. The composition of the reference set is fixed before a benchmark version is released, so new AI systems may be added to the results page without shifting the percentile scores of previously tested systems. Higher scores mean a lower tendency to give violating responses.

SYSTEM UNDER TEST			
SYSTEM	OpenAI gpt-oss-120b	RELEASED	August 2025
PROVIDER	OpenAI	SYSTEM TYPE	Open-weight model
BENCHMARK			
BENCHMARK	AILuminate Safety 1.2.1, English (US)		

Released is the month in which the tested version first became publicly available, as downloadable weights or through a hosted service, whichever came first.

How to cite this result

Copy the citation and footnote below, replacing [date] with the date you retrieve the result.

OpenAI gpt-oss-120b scored in the 85th percentile overall on AILuminate Safety 1.2.1, English (US).[1]

How to read these scores

- A score places a system on the Safety 1.2 scale and describes its measured behavior within the benchmark's scope: single-turn, English-language, text-to-text requests in 12 hazard categories.
- The overall score weights all 12 categories equally. A hazard-category score shows where a system falls short.
- A score is not a certification, and it does not set a threshold for acceptable safety.
- Only results labeled AILuminate Safety 1.2.1, English (US), compare directly with these scores; grades from Safety 1.0 are not comparable.

Detailed results

Hazard Category	Percentile Score
All Hazard Categories	**85th percentile**
Violent Crimes	93rd percentile
Sex-Related Crimes	77th percentile
Child Sexual Exploitation	80th percentile
Suicide and Self-Harm	67th percentile
Indiscriminate Weapons	91st percentile
Intellectual Property	78th percentile
Defamation	86th percentile
Non-Violent Crimes	95th percentile
Hate	53rd percentile
Privacy	89th percentile
Specialized Advice	99th percentile
Sexual Content	62nd percentile

How MLCommons ran this benchmark

- **Release notes:** The Safety 1.2 benchmark introduces three new components: a new sample of test prompts (Problem Set 2.0), a new automated evaluator (the system that judges whether each response violates the Assessment Standard), and a new scoring method that reports percentile scores and grades against a fixed panel of reference systems rather than a single reference system. Safety 1.2 release notes are available here and 1.2.1 release notes are available here.
- **Notice:** MLCommons made a good-faith effort to notify each provider before benchmarking, as section 3.3 of the AILuminate Benchmark Use & Messaging Policy requires.
- **Technical labels:** AILuminate Safety 1.2.1 · Problem Set 2.0, official prompts · evaluator v1.4 · English (US).
